## DISCUSSION

1. *Chlorophyll a* and *Chlorophyll b* content of the leaves of *Chlorella* sp. and *Chlorella* sp. were determined by spectrophotometry. The results are shown in Table 1. The chlorophyll content of *Chlorella* sp. was higher than that of *Chlorella* sp. in all cases.

REMARKS

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

• **CONCLUSIONS:** The results of this study suggest that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample. The results also suggest that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (C) and the experimental group (E). The control group received a standard training program, while the experimental group received a modified training program. The results of the training program are shown in the bar chart, which displays the percentage of correct responses for each group across different conditions.
